

Mechanical distributor RV 10 – flexible accessory unit for concrete placing

Mechanical distributors lend themselves perfectly where placement using truck-mounted pumps and stationary placement booms reach their technical and cost-efficient limits; i.e.

- in large areas and floors which are either out of reach or only partly within the placement reach of truck-mounted pumps
- for floors and pillars where the use of a placement boom would be too complicated
- in projects, e.g. manufacture of prefab units

The mechanical distributor RV 10 is ideal for use on large areas and floors. Areas of up to 320 m²

respectively can be concreted from one fixed location thus dispensing with difficult installation conditions caused by loose delivery lines lying about on the floor.

The light-weight and flexible RV 10 is suited to smaller construction sites.

By relocating the distributor with a construction crane, practically any size area can be concreted by simply extending or shortening the delivery line or delivery hose. The delivery lines are connected to one another using rapid-release couplings, ideal for use on site.

The size of the mechanical distributor when ready for transport does not take up much space, so it can be easily carried by truck or trailer to different construction sites.

Easily dismantled single weights and ballast beams allow the RV 10 to be quickly taken apart to save space during transport.

Mechanical distributor RV 10

Weights RV 10

Weight excluding ballast 1020 kg

Ballast 600 kg

Art.-Nr. 426078

Screw-on feet

can be used to increase the height of the RV 10 by 1 m.

1 set (4 pieces)
part no. 441194

Underlay disc for RV 10

1 set (4 pieces)
part no. 481026
